estenhl Merge pull request #26 from estenhl/packaging 7671d00 · 4 months ago 123 Commits

citations	Finished READMEs for now	9 months ago
docker	Updated docker containers, small linting fixes, fixed bug ...	9 months ago
notebooks	Updated docker containers, small linting fixes, fixed bug ...	9 months ago
preprocessing	Finished models, pre/postprocessing and example from ...	10 months ago
pyment	Tried moving data folder (although I don't want to)	5 months ago
scripts	Updated docker containers, small linting fixes, fixed bug ...	9 months ago
tests	Removed redundant data folder	5 months ago
.gitignore	More tests and comments, modified README	9 months ago
CHANGELOG.md	More tests and comments, modified README	9 months ago
LICENSE.md	Added license and citation	2 years ago
README.md	Finished READMEs for now	9 months ago
requirements.txt	Fixed docker containers	10 months ago
setup.py	Tried moving data folder (although I don't want to)	5 months ago

README License

This is a repository containing pretrained models for neuroimaging data used in various scientific publications. The publications are listed here, and all the models are listed here. After version 3.0.0 the nature of this repo changed, a description of which can be found in the changelog. The models posted here try to mimic the behaviour and interface of the pretrained models in the Keras applications package. Besides the possibility of importing this library in Python and interacting with the models as Python-objects, we demonstrate three use cases for interaction here:

- Jupyter notebooks
- Command-line scripts
- Docker containers

No description, website, or topics provided.

Background

1. Showcase the **general efficacy** of artificial intelligence for demonstrative clinical use-cases

Background

1. Showcase the **general efficacy** of artificial intelligence for demonstrative clinical use-cases
2. Build predictive models to solve specific **real-world clinical problems** using **commercially available data**
3. Ensure the **robustness and utility** of the models through extensive validation
4. Collaborate with clinicians to package the models in **user-friendly interfaces** integrating smoothly into **standardized clinical workflows**
